- Indications are that the dried products will figure more and more prominently in the army ration on the western front. It may be noted that there is now a bill before Congress to appropriate \$250,000 to enable the Secretary of agriculture to establish plants for the drying or dehydration of vegetables, fruits and other edible products in connection with the land-grant colleges in several states. E. Clemens Horst, one of the pioneers in the dehydration industry, says it would cost \$5,000,000 to develop a dried fruit and vegetable market within two or three years; but if our Government advertise it along the line that the product is good every housewife will want the product.—Business Digest

Federal laws, regulations, and rulings affecting the land-grant colleges of agriculture and mechanic arts. 19p '16 U.S. Bureau of educ.; 5c Supt. of doc., Washington, D. C.  
New York (state)—Gov. Whitman discusses the widespread discontent among the rural communities due to the passage of the so-called township law which provides for the consolidation of certain rural schools. He recommends an amendment to the law, which will still allow the citizens of a district to vote on the amount of money to be expended for school purposes, instead of leaving the financial question to be decided by the town board of education. He considers that the law has failed to accomplish properly the purpose for which it was enacted

**Investigations**

Uruguay—Government has appointed a commission to make further investigations and experiments with respect to the utilization of locusts for industrial purposes recommended by Sr Alejandro Otaegui. Sr Otaegui has been experimenting for some time, and believes that locusts can be profitably utilized in the manufacture of fertilizer, soap, lubricants, and stock food. The locust is, it is stated, rich in nitrogen and phosphoric acid

Map of New York showing the distribution of limestones. N Y State Ag Exp Rep 1915: (in pocket) '16

State and county agricultural maps, accurately showing local farm products, are suggested as a library contribution to food conservation by Cornelia Marvin, library public information director for Oregon. These maps are made by the librarians, who start with a post-route map of their state, sold by the third assistant postmaster general. Statistics of farm production are indicated on the map in graphic form, together with information about local industries. These maps

**Maps**—*Continued*

are useful not merely in indicating lines along which farm production can be increased, but they show the consuming public what food staples are raised locally, making it possible to center consumption upon them and decrease hauling of outside commodities

- Maine has organized definite machinery for the marketing of its 1918 crops with a view to improving the farmer's selling conditions and increase the state's consumption of its own soil products. At a recent meeting of the State Committee on food production and conservation, a marketing committee was appointed. A bureau of information is to be established to deal with prices and output of farm products. At the close of the 1918 harvest a survey will be made of crops by counties through committees and organizations that already exist. A survey is to be made immediately of the markets of the state to ascertain their requirements of produce grown in Maine, this work being undertaken by boards of trade, chambers of commerce, labor organizations, and committees of public safety

**Laws and legislation**

- South Australia—Act providing that if fruit growers subscribe a certain sum and come in as individuals on cooperative principle, government may advance money to construct packing sheds and grading plant. Bill provides for advances being made for cool stores, storage and packing of fruit, erection of canning and packing factories, preservation of fruit and vegetables, erection of fruit packing sheds, erection of butter, cheese and bacon factories, and silos. Silo is the only thing that does not come under the heading of cooperative system. (Passed Assembly 1917)
- Victoria—Act providing that majority of orchardists within given area can petition for creation of fruit trust, and trust has power to levy compulsory rate and then obtain government advance for building cool stores. Measure is designed to enable fruit-growers collectively to build cool stores and establish canning, drying and packing and preserving establishments. (Passed Assembly '17)
